

Follow-up Visit of High Risk Infants

Status: RECRUITING

Eligibility Criteria

Sex: ALL

Age: 18 months to 26 months old

Healthy Volunteers: This study is NOT accepting healthy volunteers

- Infants inborn at NRN centers
- <27 weeks gestational age
- Infants enrolled in one or more additional NICHD NRN Follow-up studies. For infants that do not meet the inclusion criteria above, inclusion and exclusion criteria are determined by the criteria for the additional trial(s). In these cases, infants that are larger than 1,000 grams and/or older than 27 weeks may be included in the FU Study.

Note: These inclusion criteria were changed as of 1/1/2008. Prior to this date, infants with birth weights between 401 and 1500 grams who were admitted to NRN NICUs within 14 days of birth were included in the database.

Conditions & Interventions

Interventions:

OTHER: No Intervention

Conditions:

Infant, Newborn, Infant, Low Birth Weight, Infant, Small for Gestational Age, Infant, Premature

Keywords:

NICHD Neonatal Research Network, Extremely Low Birth Weight (ELBW), Prematurity, Neurodevelopmental Outcome, Follow up studies

More Information

Description:

The NICHD Neonatal Research Network's Follow-Up study is a multi-center cohort in which surviving extremely low birth-weight infants born in participating network centers receive neurodevelopmental, neurosensory and functional assessments at 22-26 months corrected age (Infants born prior to July 1, 2012 were seen at 18-22 months corrected age). Data regarding pregnancy and neonatal outcome are collected prospectively. The goal is to identify potential maternal and neonatal risk factors that may affect infant neurodevelopment.
