

A Study of Uveitis in Children <18 Years of Age

Status: RECRUITING

Eligibility Criteria

Sex: ALL

Age: Up to 17 years old

Healthy Volunteers: This study is NOT accepting healthy volunteers

Inclusion Criteria:

- Age:
 - Incident cases (onset $\leq$ 6 months) <17 years
 - Established cases (onset > 6 months) <18 years
- Diagnosis of any type of uveitis (infectious or noninfectious) in any location except traumatic and post-operative uveitis.
- Active or inactive uveitis with any treatment status (current / prior / none [but under surveillance]).

Exclusion Criteria:

- Bilateral uveitis with differing etiologies
- Traumatic uveitis
- Post-operative uveitis
- Immediate family member (spouse, biological or legal guardian, child, sibling, parent) who is an investigative site personnel directly affiliated with this study or who is an employee of JAEB Center for Health Research.
- Ocular disease related to Retinoblastoma, Coat's disease, retinitis pigmentosa, inherited retinal degeneration, Juvenile xanthogranuloma (JXG), or leukemia/malignancy within the eye.

Conditions & Interventions

Conditions:

Uveitis

Keywords:

pediatric, uveitis

More Information

Description:

The goal of this observational study is to collect data regarding clinical features and current/past treatments in children under 18 with uveitis. The main questions it aims to answer are: * What are the frequency of uveitis subtypes in children? * What are clinical and demographic characteristics overall and within each type of uveitis? Participants will complete one enrollment visit with their doctor. Participants with uveitis onset $\leq$ 6 months from enrollment date will also partake in a 12 month chart review.
