

Verifying Antibodies After Live Immunization Delivery (VALID): A Study of Measles Vaccine Immunogenicity in Children With Sickle Cell Disease

Status: RECRUITING

Eligibility Criteria

Sex: ALL

Age: 6 months to 6 years old

Healthy Volunteers: This study is NOT accepting healthy volunteers

Inclusion Criteria:

1. Participants with confirmed Sickle Cell Disease.
2. Participants 6 months and 6 years of age and due for measles vaccination within 3 months per national guidelines.
3. Willing and able to provide informed consent
4. Ability to comply with study related evaluations and follow-up visits.

Exclusion Criteria:

1. Known primary immunodeficiency syndrome, cancer, or acquired immunodeficiency syndrome (AIDS) that would preclude vaccination with live virus vaccines.

Conditions & Interventions

Conditions:

Sickle Cell Disease, Measles Vaccination, Sickle Cell Anemia

Keywords:

Measles Vaccine Immunogenicity

More Information

Description:

The goal of this study is to learn if infants with sickle cell disease (SCD) develop adequate protection after measles vaccines. (not looking at any prolonged duration)
