

Quality of Pediatric Resuscitation in a Multicenter Collaborative

Status: RECRUITING

Eligibility Criteria

Sex: ALL

Age: 0 years to 18 years old

Healthy Volunteers: This study is NOT accepting healthy volunteers

Inclusion Criteria:

- Patient received chest compressions for at least 1 minute
- Patient between gestational age ≥ 37 weeks and 18 years of age

Exclusion Criteria:

- Patient on veno-arterial extracorporeal membrane oxygenation (ECMO) therapy at beginning of CPR event

Conditions & Interventions

Conditions:

Cardiac Arrest, Cardiopulmonary Arrest

Keywords:

Chest compressions, Cardiopulmonary Resuscitation, Pediatric

More Information

Description:

This is a prospective, observational, multi-center cohort study of pediatric cardiac arrests. The purpose of the study is to determine the association between chest compression mechanics (rate, depth, flow fraction, compression release) and patient outcomes. In addition, the investigators will determine the association of post cardiac arrest care with patient outcomes.
