

Generic Database of Very Low Birth Weight Infants

Status: RECRUITING

Eligibility Criteria

Sex: ALL

Age: Up to 0 month(s) old

Healthy Volunteers: This study is NOT accepting healthy volunteers

Inclusion Criteria:

- Infants inborn at NICHD NRN centers that are:
- 401-1000 grams birth weight, and/or
- 20 0/7 to 28 6/7 weeks (<29 weeks) gestational age
- Infants enrolled in one or more additional NICHD NRN interventional trials or time-limited observational studies. For infants that do not meet the inclusion criteria above, inclusion and exclusion criteria for the Generic Database are determined by the criteria for the additional trial(s). In these cases, infants that are larger than 1,000 grams and/or older than 29 weeks may be included in the GDB.

Exclusion Criteria:

- Infants >1,000 grams birth weight and/or >29 weeks gestational age

Note: These inclusion criteria were changed as of 1/1/2008. Prior to this date, all infants with birth weights between 401 and 1500 grams who are admitted to NRN NICUs within 14 days of birth were included in the database.

Conditions & Interventions

Interventions:

OTHER: No Intervention

Conditions:

Infant, Newborn, Infant, Low Birth Weight, Infant, Small for Gestational Age, Infant, Premature

Keywords:

NICHD Neonatal Research Network, Extremely Low Birth Weight (ELBW), Prematurity

More Information

Description:

The Generic Database (GDB) is a registry of very low birth weight infants born alive in NICHD Neonatal Research Network (NRN) centers. The GDB collects observational baseline data on both mothers and infants, and the therapies used and outcomes of the infants. The information collected is not specific to a disease or treatment (i.e., it is "generic"). Data are analyzed to find associations and trends between baseline information, treatments, and infant outcome, and to develop future NRN trials.
